

**2014 AP<sup>®</sup> CALCULUS AB FREE-RESPONSE QUESTIONS**

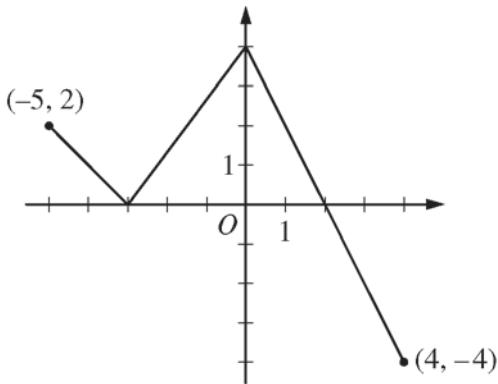

2. Let  $R$  be the region enclosed by the graph of  $f(x) = x^4 - 2.3x^3 + 4$  and the horizontal line  $y = 4$ , as shown in the figure above.
- Find the volume of the solid generated when  $R$  is rotated about the horizontal line  $y = -2$ .
  - Region  $R$  is the base of a solid. For this solid, each cross section perpendicular to the  $x$ -axis is an isosceles right triangle with a leg in  $R$ . Find the volume of the solid.
  - The vertical line  $x = k$  divides  $R$  into two regions with equal areas. Write, but do not solve, an equation involving integral expressions whose solution gives the value  $k$ .
-

Graph of  $f$

3. The function  $f$  is defined on the closed interval  $[-5, 4]$ . The graph of  $f$  consists of three line segments and is shown in the figure above. Let  $g$  be the function defined by  $g(x) = \int_{-5}^x f(t) dt$ .
- Find  $g(3)$ .
  - On what open intervals contained in  $-5 < x < 4$  is the graph of  $g$  both increasing and concave down? Give a reason for your answer.
  - The function  $h$  is defined by  $h(x) = \frac{g(x)}{5x}$ . Find  $h'(3)$ .
  - The function  $p$  is defined by  $p(x) = f(x^2 - x)$ . Find the slope of the line tangent to the graph of  $p$  at the point where  $x = -1$ .
-
