

Begin your response to **QUESTION 5** on this page.

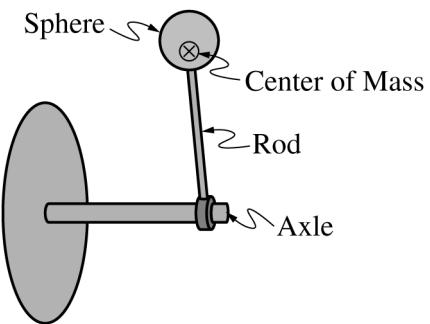

Figure 1

5. (7 points, suggested time 13 minutes)

A rod with a sphere attached to the end is connected to a horizontal mounted axle and carefully balanced so that it rests in a position vertically upward from the axle. The center of mass of the rod-sphere system is indicated with a  $\otimes$ , as shown in Figure 1. The sphere is lightly tapped, and the rod-sphere system rotates clockwise with negligible friction about the axle due to the gravitational force.

A student takes a video of the rod rotating from the vertically upward position to the vertically downward position. Figure 2 shows five frames (still shots) that the student selected from the video.

Note: these frames are not equally spaced apart in time.

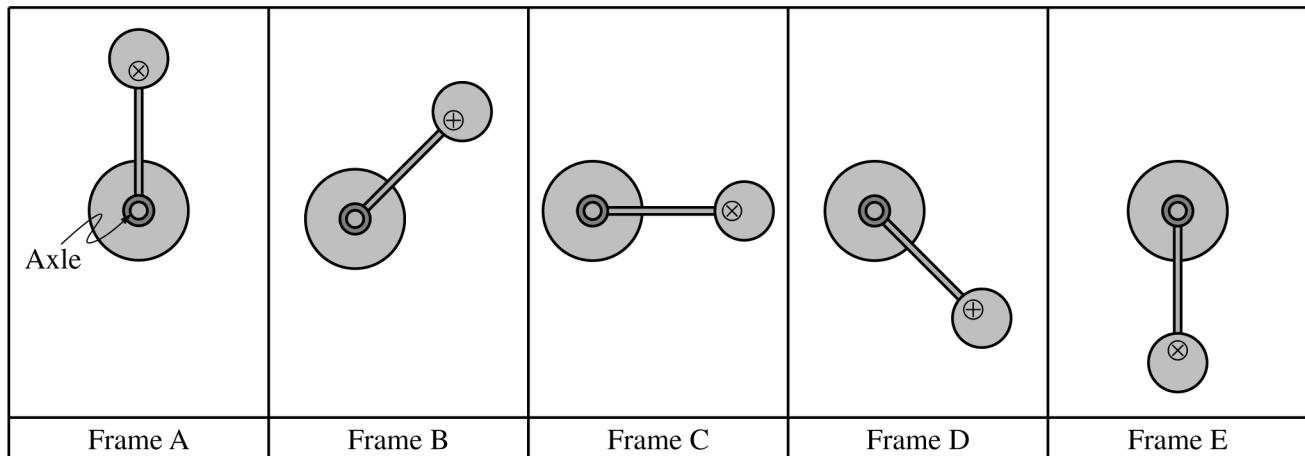

Figure 2

**GO ON TO THE NEXT PAGE.**

Continue your response to **QUESTION 5** on this page.

(a) Use the frames of the video shown in Figure 2 to answer the following questions.

i. In which frame is the angular acceleration of the rod-sphere system the greatest? Justify your answer.

ii. In which frame is the rotational kinetic energy of the rod-sphere system the greatest? Briefly justify your answer.

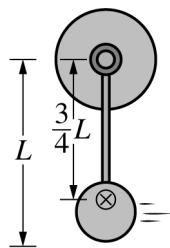

Figure 3

(b) The rod-sphere system has mass  $M$  and length  $L$ , and the center of mass is located a distance  $\frac{3}{4}L$  from the axle, shown in Figure 3.

i. Derive an expression for the change in kinetic energy of the rod-sphere-Earth system from the moment shown in Frame A to the moment shown in Frame E. Express your answer in terms of  $M$ ,  $L$ , and fundamental constants, as appropriate.

ii. Briefly explain why the rod and sphere gain kinetic energy, even if Earth is not included in the system.

**Question 5: Short Answer****7 points**

- (a)(i)** For indicating “Frame C” with correct reasoning about the magnitude of the torque being the greatest **1 point**

Accept **one** of the following:

- This is the instant when the lever arm is greatest.
- This is when the angle between radius vector and weight force vector is most perpendicular.

---

For correctly relating torque and angular acceleration:  $\alpha \propto \tau$

**1 point**
**Example Response**

*The angular acceleration is greatest in Frame C because angular acceleration is proportional to torque, and in Frame C the gravitational force vector is directed perpendicular to the rod (lever arm) which means this is where the torque will be the greatest.*

- (a)(ii)** For indicating “Frame E” with correct reasoning **1 point**

Accept **one** of the following:

- Work or energy (e.g., this is when the maximum work has been done on the system by gravity.)
- Angular momentum (e.g., the torque due to gravity is clockwise the entire time, causing the rod to gain angular momentum.)
- Kinematics (e.g., the rod speeds up the entire time.)

**Example Response**

*The rotational kinetic energy is greatest in Frame E because this is where the rod-sphere system has the greatest rotational speed since the torque has been in the same direction as the motion the entire time.*

---

**Total for part (a) 3 points**

- 
- (b)(i)** For a multistep derivation that begins with conservation of energy 1 point

$$E_i = E_f \quad \text{OR} \quad \Delta E = 0 \quad \text{OR} \quad U_{gi} + K_i = U_{gf} + K_f$$

---

For indicating the change in height is equal to  $\frac{3}{2}L$  1 point

$$\Delta y = \frac{3}{2}L$$

---

For an answer consistent with the height change indicated previously in the response 1 point

$$K_f = \frac{3}{2}MgL$$

**Scoring Note:** A correct answer of  $K_f = \frac{3}{2}MgL$  with no supporting work can earn only this point.

---

**Example Response**

$$\begin{aligned} E_i &= E_f \\ U_{gi} + K_i &= U_{gf} + K_f \\ \Delta K &= U_{gi} - U_{gf} \\ \Delta K &= Mg\Delta y \\ \Delta y &= \frac{3L}{4} + \frac{3L}{4} = \frac{3}{2}L \\ \Delta K &= \frac{3}{2}MgL \end{aligned}$$

- 
- (b)(ii)** For indicating that the gravitational force is the external force that does work on the rod-sphere system 1 point

---

**Example Response**

*The rod and sphere gain kinetic energy due to the positive work done by the gravitational force, which is an external force for the rod-sphere system.*

---

**Total for part (b) 4 points**

---

**Total for question 5 7 points**
